Java

```java
class Solution {
    public long countCompleteDayPairs(int[] hours) {

    }
}
```

JavaScript

```javascript
/**
 * @param {number[]} hours
 * @return {number}
 */
var countCompleteDayPairs = function(hours) {

};
```

TypeScript

```typescript
function countCompleteDayPairs(hours: number[]): number {

};
```

C++

```cpp
class Solution {
public:
```

```cpp
    long long countCompleteDayPairs(vector<int>& hours) {

    }
};
```

C#

```csharp
public class Solution {
    public long CountCompleteDayPairs(int[] hours) {

    }
}
```

Kotlin

```kotlin
class Solution {
    fun countCompleteDayPairs(hours: IntArray): Long {

    }
}
```

Go

```go
func countCompleteDayPairs(hours []int) int64 {

}
```
